

```
StringBuilder sb = new StringBuilder("SpaceStation");
sb.delete(5, 6).insert(5, " S").toString().toUpperCase();
System.out.println(sb); //Space Station
```

```
String text = "ONE ";
System.out.println(text.concat(text.concat("ELEVEN ")).trim());

"ONE".concat(ONE.concat("ELEVEN")).trim()
"ONE".concat(ONE.ELEVEN).trim()
ONE ONE ELEVEN
```

```
String[] strings = "iNeuron_Technology_privatelimited_Known_For_Java".split("_", 3);
for (String string : strings)
    System.out.println(string);
```

how many index it should have
for an array?

iNeuron
Technology
privatelimited_Known_For_Java
