

```
String s1= "Java";
String s2=new String("java");
//line-1
{
    System.out.println("equal");
}else{
    System.out.println("not equal")
}
```

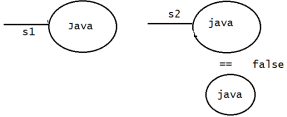

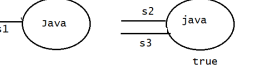

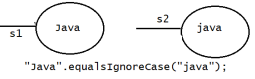

To print equal which code fragment should be inserted?

A. String s1=s2;
if(s1==s2)

B. if(s1.equalsIgnoreCase(s2))

C. String s3= s2;
if(s3.equalsIgnoreCase(s3))

D. if(s1.toLowerCase() == s2.toLowerCase())

```
final String fName = "James";
String lName = "Gosling";
String name1 = fName + lName; //JVM
String name2 = fName + "Gosling"; //Compiler"JamesGosling"
String name3 = "James" + "Gosling"; //Compiler"JamesGosling"

System.out.println(name1 == name2); //false
System.out.println(name2 == name3); //true
```
